Sequence 7, Application US/09601478

Patent No. 6403785

GENERAL INFORMATION:

APPLICANT: Ostuka Pharmaceutical Co., Ltd.

TITLE OF INVENTION:

FILE REPERENCE: Q60193

CURRENT PELLING DATE: 2000-03

PRIOR APPLICATION NUMBER: UF H10-134679

FRIOR FILING DATE: 1998-04-28

PRIOR FILING DATE: 1998-03-05

PRIOR FILING DATE: 1998-03-05

PRIOR FILING DATE: 1998-03-05

PRIOR RILING DATE: 1998-03-05

PRIOR RILING DATE: 1998-02-03

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin Ver: 2.1.

Genomic Science Renter and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. First strand cDNA was primed with a primer [5, GAGAGAGAAGGATCCAAGAGCTTTTTTTTTTTTTTTTTVN 3], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 7.5 and subtraction to Rot = 37.5. Second strand cDNA was prepared with the primer adapter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (10-JUL-2000) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIREN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute, 1-7-22 Subhiro-cho, Tsurumi-ku, Yokohama, Kanagawa 210-0045, Japan (E-mail:Genome-res@gsc.riken.go.jp, NBL:http://genome.gsc.riken.go.jp/, Tel:81-45-503-9222,

Ul-CF-EN1 is a normalized CDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis
Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:991-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligomucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

/ Lote="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; Ul-E-EJ1 is a subtracted cDNA library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tags for this library are: fetal eyes, AGAATCAAGA; lens CGATTAGCGA; eye anterior segment, AATGCCGAT; optic nerve, CCATTAGCTG; retina, CGGGG, Retina Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
